

MANAGEMENT PHILOSOPHY

- We focus on companies with durable profitability, high returns on capital, strong free cash flow generation and generous cash return to shareholders.
- We concentrate our portfolio only in our best ideas given company geographic and product mix, competitive positioning, and our read of key industry trends.
- We look for attractive valuations due to market misperceptions with catalysts for multiple expansion and earnings upside.
- Our sectors of focus have exhibited resilient demand through economic cycles and tend to be structurally undervalued due to institutional avoidance. They should provide defensive growth.

INVESTMENT STRATEGY

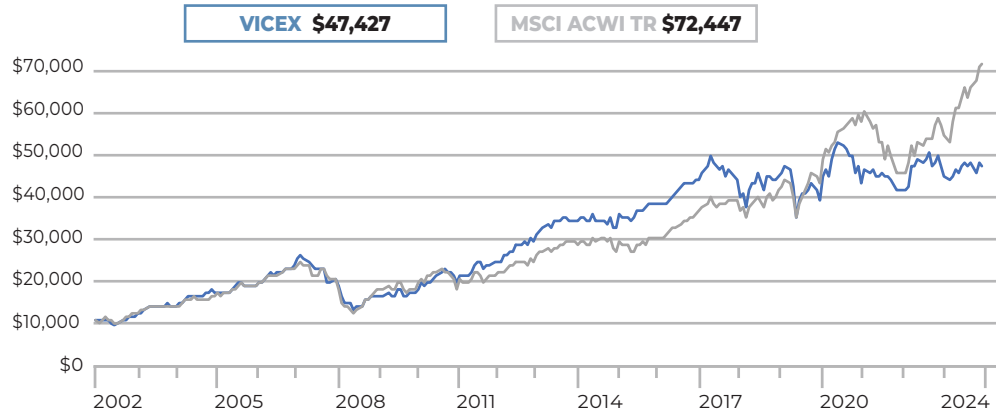

- Maintain a concentrated portfolio of what we believe are best-in-class equity investments within the global tobacco, alcoholic beverages, gaming, and aerospace/defense industries.
- Keep active share high through concentration in our best ideas.
- As our sectors are global in nature, over 40% of assets are in foreign companies.
- Strategically utilize up to 20% of assets to invest outside core sectors in other socially controversial areas to increase industry diversification

Mutual fund investing involves risk; principal loss is possible. The Fund will concentrate its net assets in industries that have significant barriers to entry including the alcoholic beverages, tobacco, gaming and defense/aerospace industries, the Fund may be subject to the risks affecting those industries, including the risk that the securities of companies within those industries will underperform due to adverse economic conditions, regulatory or legislative changes or increased competition affecting those industries, more than would a fund that invests in a wide variety of industries. The Fund invests in foreign securities which involve greater volatility and political, economic and currency risks and differences in accounting methods. The Fund invests in smaller companies, which involve additional risks, such as limited liquidity and greater volatility. Derivatives may involve certain costs and risks such as liquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Investing in derivatives could result in losing more than the amount invested. If a security sold short increases in price, the Fund may have to cover its short position at a higher price than the short sale price, resulting in a loss.
